- Customer programmable flash-pattern capability to meet specific fleet requirements
- Weather-resistant, durable, low-power LEDs
- \$700 MSRP;\*\* dealer installation fees may apply when purchased after vehicle sale
- Serviceable at Ford dealerships nationwide and backed by a three-year/36,000-mile limited warranty†

\*Should only be used on or near work site and not during normal road driving.

\*\*Taxes extra. †See your dealer for a copy.

Ford is offering an available factory-installed strobe warning LED light kit for all models of 2016 F-Series Super Duty trucks for customers – such as utility, road construction or municipal crews – that require enhanced vehicle visibility while working on-site.\* The no-drill option is warranted and not susceptible to corrosion issues that can be a result of poor aftermarket installation. The front- and rear-mounted amber-strobe lights that have been evaluated for any applicable regulations and industry standards, can be seen as far as 1,000 feet away during the day and as far as a mile away at night. The strobe lights installed on F-Series Super Duty trucks in use at worksites are designed to warn motorists and others that workers may be present and to proceed with caution.
