# ANATOMY OF A DRUGGED DRIVING SUIT

Ford's Drugged Driving Suit simulates some of the effects of taking various drugs such as cannabis and cocaine

# **HEADPHONES**

play background sounds to confuse and distract

# VISION IMPAIRMENT GLASSES

produce blurred vision and flashing lights, and cause tunnel vision

## NECK BANDAGES

restrict head movement

## **WRIST WEIGHT**

slows reaction time, affects balance

# TREMOR GENERATOR

makes hands shake

# KNEE BANDAGES

slow movement

## **ANKLE WEIGHT**

worn on the opposite side of the body as the wrist weight, slows reaction time, affects balance

# ELBOW BANDAGES

slow movement

# Last year,

9.9 million

people reported driving under the influence of drugs\*

# Ford Driving Skills

# **CANNABIS**

slows reaction time, affects concentration, reduces ability to steer vehicle

#### COCAINE

causes erratic behavior.
Users lack concentration,
and feel sleepy after initial
resistance to tiredness

# **ECSTASY**

causes an adrenaline surge, giving drivers a feeling of overconfidence

## LSD

causes difficulty judging vehicle speed, movement; hallucinations; confusion

# HEROIN

slows reactions, blurs vision, makes driver feel drowsy and confused
