

# 2016 LINCOLN MKX: DESIGN

A dramatic, sculpted exterior defines the all-new 2016 Lincoln MKX midsize utility. Power, agility and confidence are communicated through the lines, surface language and execution.

The bodyside's crisp undercuts are inspired by a wing profile while the graphic of the split-wing grille also draws inspiration from aerodynamic shapes. The design execution of the 2016 Lincoln MKX evolves the brand design for utilities in a bolder, stronger direction.

The proud shoulders and horizontal beltline help define the muscular character.

Clean, seamless integration and premium execution of advanced technology is apparent front to back.

Demonstrating the theme of dramatic form and dynamic function, the available full-LED headlamps are subtly executed as blades, rather than projectors, aligned with the horizontal execution of the Lincoln signature split-wing grille.

Subtly executed in the grille area is the available front camera, which deploys from behind the Lincoln Star badging. This thoughtful approach helps offer the convenience of a 360-degree view for the driver while maintaining the location of the Lincoln Star badge on the front of the vehicle.

At the rear, this clean approach to design and functionality is mirrored in the integrated power dome, which houses

radio and satellite antennas on the spoiler. This execution, which eliminates an antenna jutting out, creates a clean design.

The signature full-width taillamp employs a filter to help the lamp read as one piece, rather than disparate dots of light. Below, integrated exhaust bezels unify the lower area.
